K-ONE IT SOLUTIONS WEBSITE

An independent studio with a small, honest portfolio

YEAR	ROLE	TEAM	STATUS
2025	Founder, engineer, designer	Founder	Live

Summary

K-ONE IT SOLUTIONS is the studio I founded in Johannesburg in 2025: a company site, a React social platform and a Dockerised server health monitor, built for real clients and real operations.

The problem

What is built

- Hand-built with HTML, CSS and PHP.

Decisions that matter

Small scope, running system

Choice. Engagements end with a working system, not a slide deck.

Why. Delivery is the proof.

Trade-off. Fewer projects run in parallel.

Rand quote after scoping

Choice. Work is quoted in rand after a short scoping conversation.

Why. No invented prices.

Trade-off. There is no instant checkout.

A link for every project

Choice. Each project on the site has a live link or public source.

Why. Claims stay checkable.

Trade-off. Work without public artefacts stays off the site.

Stack

`HTML` `CSS` `PHP` `React` `Python` `Docker`
